PHASE 3:

DEVELOPMENT PART-1:

Software used for Coding:

1. Virtual Studio Codes
2. Python 3.11.5

In this part,

1. I created a virtual environment,
2. Created a user interface in web using HTML,
3. And installed the required libraries like Transformers for GPT -3 , Flask for web development and some required modules.

1.Create a Virtual environment:

Here have some commands to run the environment

```
pip install virtualenv

virtualenv venv

venv\Scripts\activate
```

2.Create a user interface using HTML:

Here I give the code for HTML,

```
<!DOCTYPE html>
<html>
<head>
   <title>GenAI-Bot</title>
   <meta name="viewport" content="width=device-width, initial-scale=1">
   <script src="https://ajax.googleapis.com/ajax/libs/jquery/3.2.1/jquery.min.js"></script>
   <link rel="stylesheet" href="https://maxcdn.bootstrapcdn.com/bootstrap/3.4.1/css/bootstrap.min.css">
   <script src="https://ajax.googleapis.com/ajax/libs/jquery/3.6.4/jquery.min.js"></script>
   <script src="https://maxcdn.bootstrapcdn.com/bootstrap/3.4.1/js/bootstrap.min.js"></script>
   <style>
      * {
        box-sizing: border-box
      }
/* Set height of body and the document to 100% */
      body, html {
        height: 100%;
        margin: 0;
        font-family: Arial;
        background-color: darkgrey;
      }
      #chatbox {
       display: block;
      margin-left: auto;
      margin-right: auto;
      width: 90%;
      margin-top: 60px;
     }
     #userInput {
      margin-left: auto;
      margin-right: auto;
      margin-top: 30%;
     tab-size: 30%;
     color: green;
     background-color: white;
     }
     #textInput {
      width: 100%;
      border: sandybrown;
      border-bottom: 3px transparent black;
      font-family: Arial, Helvetica, sans-serif;
      font-size: 40px;
     }
     .userText {
      color: white;
      font-family: monospace;
```

```
  font-size: 40px;
  text-align: right;
  line-height: 60px;
}
.userText span {
  background-color: green;
  padding: 10px;
  border-radius: 10px;
}
.botText {
  font-family: monospace;
  font-size: 30px;
  text-align: left;
  line-height: 50px;
}
.botText span {
  color: white;
  background-color: #4169e1;
  padding: 10px;
  border-radius: 10px;
}
#tidbit {
  position: absolute;
  bottom: 0;
  right: 0;
  width: 300px;
}
.boxed {
  margin-left: auto;
  margin-right: auto;
  width: 90%;
  border: 5px solid black;
  background-color: white;
}
img{
  float: left;
}
.navbar-header
{
  display: block;
}
.navbar-brand
{
color: blue;
font-size: 40px;
margin-top: 30px;
padding: 20px;
font-family: 'Times New Roman', Times, serif;
```

```
    }
  </style>
</head>
<body>
 <nav class="navbar navbar-default">
  <div class="container-fluid">
   <div class="navbar-header">
    <img src="..\\chatbot1.jpg" height="100" width="120">
    <h1 class="navbar-brand" href="#"><b color="blue">CHATBOT</b></h1>

 </nav>
 <div id="header">
   <h4 align="center"><b>Please start your personalized interaction with the chatbot</b></h4>
 </div>
<div>
    <div class="boxed">
      <div>
        <div id="chatbox">
          <p class="botText">
            <span>Hi! I'm your AI-Generative Chatbot</span>
          </p>
        </div>

        <div id="userInput" action= "getBotResponse()" method="post">
          <input id="textInput" type="text" name="msg" placeholder="Message" />
        </div>
      </div>

      <script>
        function getBotResponse() {
          var rawText = $("#textInput").val();
          var userHtml = '<p class="userText"><span>' + rawText + "</span></p>";
          $("#textInput").val("");
          $("#chatbox").append(userHtml);
          document.getElementById("userInput")
            .scrollIntoView({ block: "start", behavior: "smooth" });
          var botHtml = '<p class="botText"><span>' + "rawText" + "</span></p>";
          $("#textInput").val("");
          $("#chatbox").append(botHtml);
          document.getElementsByClassName("botText")
            .scrollIntoView({ block: "start", behavior: "smooth" });
        }
        $("#textInput").keypress(function (e) {
          if (e.which == 13) {
            getBotResponse();
          }
        });
```

```
        </script>
    </div>
  </div>
</body>
</html>
```

3.Required Libraries:

Here, have some commends to install required libraries

```
pip install flask

pip install transformers

pip install openai

pip install pandas
```
