## PHASE 2

## INNOVATION

As the world faces growing environmental challenges such as climate change, deforestation, and pollution, there is a pressing need to empower individuals with the knowledge and tools to make eco-friendly choices in their daily lives. Our chatbot will address this by providing personalized guidance, resources, and support to users interested in reducing their environmental impact.

## Features:

**Personalized Sustainability Profile:** Users can create a sustainability profile by answering questions about their current lifestyle, habits, and environmental goals.

**Environmental Impact Assessment:** The chatbot can assess the user's carbon footprint and environmental impact based on their transportation, energy usage, diet, and consumption patterns.

**Green Recommendations:** Provide personalized recommendations for reducing environmental impact. This could include suggestions for eco-friendly products, energy-saving tips, waste reduction strategies, and sustainable transportation options.

**Sustainable Shopping Assistant:** Help users make environmentally conscious purchasing decisions by offering information on sustainable brands, products, and ethical sourcing.

**Meal Planning:** Assist users in planning eco-friendly meals by suggesting plant-based recipes, explaining the environmental impact of different food choices, and providing shopping lists for sustainable ingredients.
